March 4, 2017

Important note

This theme is an unofficial theme.
It only uses the colors of the GYPT logo.

Dependencies

The GYPT theme requires \LaTeX 2 ϵ and the following packages:

- `appendixnumberbeamer`
- `etoolbox`
- `calc`
- `pgfopts`
- `keyval`
- `tikz`

1 Using the theme

For using the theme, you have to copy the file `beamerthemeGYPT.sty` into the folder containing the master file of your presentation. Advanced users may also install the style file on their local system.

After that, you use the command `\usesthem{GYPT}` to set the theme used in your presentation to the GYPT theme.

2 Theme options

You can pass some options to the theme which influence how the theme looks.

Syntax: `\usetheme[options]{GYPT}`

Available options:

- **numbering**
Influences how the frames are numbered
 - none
The frames aren't numbered
 - counter
The frames are numbered with a simple counter
 - fraction *default*
The frames are numbered with current frame / total frames
 - appedix
An “Appendix” remark is shown instead of the frame numbers.
This setting gets automatically set for frames in the appendix.
- **footline**
Influences how the footline of the theme looks
 - none
No footline is shown
 - standard *default*
The standard footline containing author, title and framenumbers is shown.
 - smallcaps
The standard footline with small caps font shape
- **titleformat title**
Influences the style of the presentation title on the title frame
 - regular *default*
The presentation title is set in normal boldface style
 - smallcaps
The presentation title is set in boldface and small caps style

3 Style sample

This style sample was made using the sample presentation “Steine” created by A. Arzberger and S. Friedl.
